Value-Based Care Service For States

Providing end-to-end policy decision support

Deriving value from Medicaid programs requires a strong dependence on the following Mathematica value-based care service core offerings:

1. Policy decision support
2. Monitoring

The complexity of payment and delivery system reform requires intimate knowledge of Medicaid policy combined with sophisticated yet approachable technical solutions. States want to analyze large and potentially diverse data sets swiftly and with minimal technical expertise.

Mathematica's **value-based care service** allows states to adapt to the rapidly changing environment of Medicaid payment and delivery system reform through the adoption of two core offerings: (1) policy decision support and (2) monitoring.

Mathematica leads with the subject-matter expertise necessary to translate the national insights we have gained working for the Centers for Medicare & Medicaid Services and state Medicaid agencies into state-specific planning, execution, and oversight. We configure technical solutions to fit state needs and staff analytic capabilities.

How Mathematica's value-based care service can deliver value:

Mathematica will work with you to translate policy into action and monitor the effectiveness of your policies in a continual, virtuous cycle.

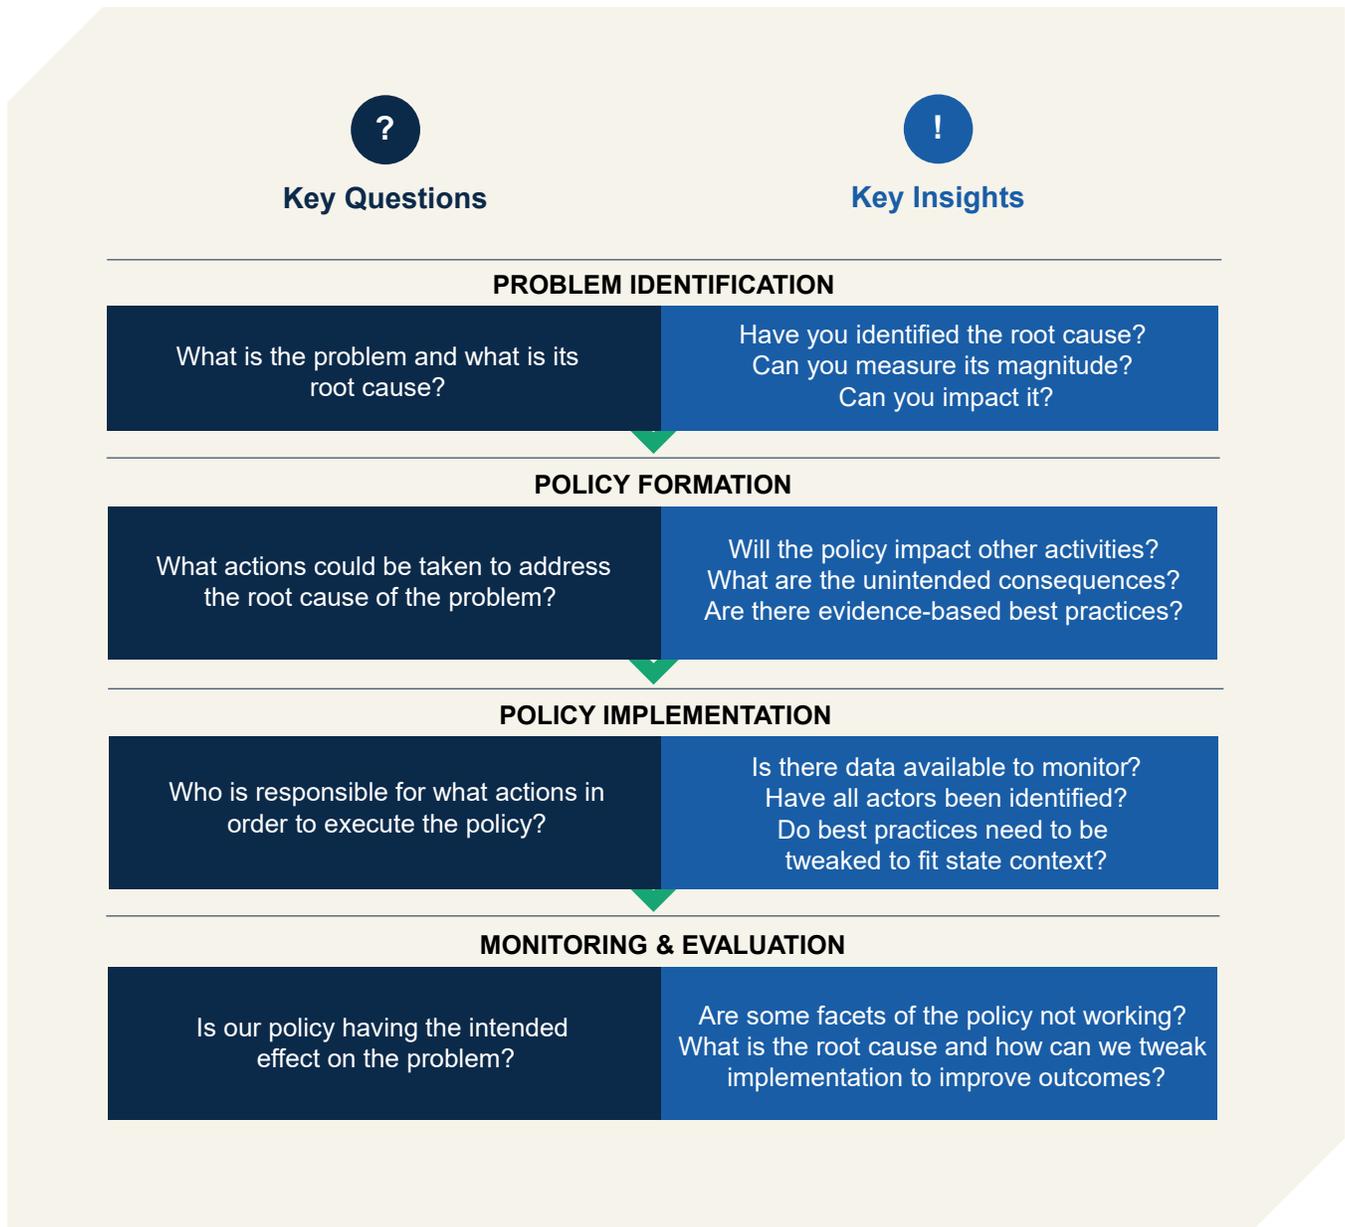

SERVICE #1: Policy decision support

Policy decision support (PDS) involves surfacing design, implementation, and process improvement to help states with program decision making. Mathematica's PDS offering provides decision-making frameworks and data-driven tools for optimizing policy implementation, estimating program impacts, and integrating continual quality improvement.

As a special-use case of PDS, Mathematica provides **value-based payment transformation services** to help states transitioning from a fee-for-service or managed-care delivery and payment system to payment and delivery system models that promote value among providers.

SERVICE #2: Monitoring

After a policy or program has been implemented, Mathematica offers monitoring services that help states oversee impacts of change in near real time. This offering supports monitoring for managed care organization contract compliance in the areas of access to care, utilization, and health care quality and outcomes monitoring, including intended and unintended consequences.
